

Appl. No. 09/662,533  
Amdt. dated Sept. 20, 2004

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1      Claim 1 (currently amended): A method for discovering the  
2      topology of a network comprising the steps of:  
3            initially resolving positions of end stations on the  
4      network; and  
5            subsequently resolving the topology of remaining  
6      devices on the network;  
7            wherein said end stations positions resolving step  
8      comprises the steps of:  
9                determining, for a port of a managed device on the  
10     network, a first address of any packet which has been  
11     received by said port;  
12        determining, for said port, whether said packet  
13     contains a second address; and  
14        if said packet does not contain the second  
15     address, specifying that the port is connected to an end  
16     station.

Claims 2 and 3 (canceled).

1      Claim 4 (Original): A computer program on a computer  
2      readable medium loadable into a digital computer or embodied

Appl. No. 09/662,533  
Amdt. dated Sept. 20, 2004

3 in a carrier wave, said program including software for  
4 carrying out the method of claim 1.

1 Claim 5 (Original): A computer program on a computer  
2 readable medium loadable into a digital computer or embodied  
3 in a carrier wave, for discovering the topology of a network  
4 comprising:

5 a program step to query a port of a managed device for  
6 a first address of any packet which has been received;

7 a program step for querying the same port of the device  
8 for a second address of any packet which has been received;

9 if there is no second address, returning relevant data  
10 to a manager and determining if there is another port on the  
11 device;

12 if there is a second address, determining if there is  
13 another port on the device;

14 if there is another port on the device, repeating the  
15 preceding four steps for another port of the managed device;

16 if not, repeating the preceding five steps in respect  
17 of another managed device.

1 Claim 6 (previously presented): A method for discovering the  
2 topology of a network, the method comprising the steps of:

3 (a) querying a port of a managed device on the network  
4 for a first address of any packet which has been received by  
5 the managed device;

6 (b) querying said port of the device for a second  
7 address of any packet which has been received by the managed  
8 device;

9 (c) if said second address does not exist, returning  
10 appropriate data to a manager and determining if there is  
11 another port on the managed device;

Appl. No. 09/662,533  
Amdt. dated Sept. 20, 2004

12                 (d) if said second address exists, determining if there  
13                 is said other port on the device;  
14                 (e) if said other port exists on the managed device,  
15                 repeating steps (a) - (d) for said other port; and  
16                 (f) if said other port does not exist on the managed  
17                 device, repeating steps (a) - (e) for another managed device  
18                 on the network.
